Loops (Nested)

method/function

Functions / Methods

return type

arguments

function declaration / definition

function body

```

int printGreetings() {
    cout << "Hello World" << endl;
    cout << "Have a great day!" << endl;
    return 0;
}

int main() {
    string name = readLine("Next?");
    while (name != "\\") {
        printGreetings();
        name = readLine("Next?");
    }
}

```

int main() {  
 // Return type is void  
 // cout << "Hello, World!" << endl; // 1  
 // cout << "How a great day!" << endl; // 2  
 // return 0; // 3  
 }

string name = getline("Next Name?");

while (name != "") {

→ print Greeting();

~~cout << "Hello, World!" << endl;~~

~~cout << "How a great day!" << endl;~~

name = getline("Next Name?");

}

return 0;

```

$> Next Name? Callan
$> Cof 100
$> Hello, World
$> How a great day
$> Next Name? 
$>
  
```

printGreetings()

void printGreetings() {

cout << "name is:" << name;

cout << "Hello, World" << endl;

cout << "Have a great day" << endl;

name  
is  
not  
defined  
here

int main() {

string name = getline("next?");

while (name != "") {

printGreetings();

name = getline("next?");

}

scope is  
limited  
to  
the  
main function

## Scope of a variable:

Extent to which a variable is  
"Valid" in the program

→ Scope starts when the variable  
is defined

→ Scope ends at the termination  
of block in which it is  
defined

→ block :- chunk of code enclosed  
in  $\{ \}$   
code

```

int main() {
  // starts "scope of v"
  v = 8; v = 8;
  if (condition) {
    v = 4; v = 4;
    // some code
  }
  v = 3;
  // some code
}
// ends "scope of v"

```

outside value of  $v = 3$

shadowing a variable

int i = 0;

if (true) {

→ ~~i = 1;~~

→ cout << i << endl; // 1 ✓

if (true) {

→ ~~i = 3;~~ //

cout << i << endl; // 3 ✓

3

cout << i << endl; → (1 2) // 3

3

cout << i << endl; // 3

```
void foo() {
```

```
    int int w=3;
```

```
    for (int i=0; i<=5; i++) {
```

```
        int w=4;
```

```
        cout << w; // 4 --
```

```
    }
```

```
    for (int i=0; i<2; i++) {
```

```
        int w=3;
```

```
        cout << w; // 3 --
```

```
    }
```

```
    cout << w; // 3
```

```
3
```

```
→ int main() {
```

```
    int w=2;
```

```
    → foo();
```

```
    cout << w; // 2
```

```

    → int i;
    → for( i=0; i<5; i++ ) {
        → cout << i;
    }
    → }
    int main()
    {
        → double u=5;
        → if( cout << u; 
           double u=7;  Err
           cout << u;
        }
    }

```

```

for (int i=0; i<5; i++) {
    cout << i << endl;
    for (int j=0; j<2; j++) {
        cout << i;
    }
}

```
